Project S278 Highway Improvements

Value £1.3 million

Description

This was a Section 278 highway scheme incorporating the realignment of the highway and signalisation of a roundabout at a busy interchange on one of the main routes into Cheltenham Town Centre. To overcome this, the scheme involved extensive traffic management and restricted daytime working plus night time working.

The scheme involved co-ordination with the main Building Contractor and Statutory Undertaker diversions to phase and programme the works to minimise disruption that included the project management of a number of trades as follows:

- Traffic management
- Surfacing
- Traffic signal installation
- Anti-skid
- Lining
- Drainage
- Footway construction
- Pedestrian safety fencing
- Soft landscaping

We were highly praised by Gloucestershire Highways who commented "Can I congratulate you on a very good job and for keeping us informed about your traffic management and keeping disruption to a minimum"

The scheme also involved the careful relocation of a commemorative plaque at Princess Elizabeth Way that was originally laid to celebrate the opening of the original road by the then Princess

Benefits for our Client

- Highly praised by Gloucestershire Highways
- Extensive phasing and programming
- Scheme finished one month early
